Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

1. Applicant's arguments with respect to claims 1-44 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-44 are rejected under 35 U.S.C. 103(a) as being unpatentable over Green et al (US Patent No. 5,664,110) and Sandberg-Diment (US Patent No. 5,826,245).

As per claims 1, 15, 29, 43 and 44 Green et al disclose a remote ordering system for allowing a user using a mobile device to order goods/services from a remote merchant via the Internet or using a web based system. The system comprises:

Receiving at an intermediary disposed between and separate from a mobile device or DPU and a plurality of merchants, first order data for an order and device identification data from the mobile device, wherein the first order data identifies one or more products or services that a user associated with the mobile device desires to purchase from one of the plurality of merchants (column 2, lines 50-63 and column 5, lines 49-63 of Green et al). Green et al do not explicitly state the order data yet includes

less than a minimum set of data required by the one merchant to completely process the order.

Sandberg-Diment discloses an electronic commerce system wherein a "verification information is provided with respect to a transaction between an initiating party and a verification-seeking party, the verification information being given by a third, verifying party, based on confidential information in the possession of the initiating party." See the abstract. In so doing, Sandberg-Diment discloses:

Storing at an intermediary, information that specifies that minimum set of data required by the one merchant to completely process the order; comparing by the intermediary first order data to the minimum set of data required by the one merchant to completely process the order; retrieving by the intermediary based upon the comparison and the device identification data, at least one data item that is not included in the first order data, but that is needed to have the minimum set of data required by the one merchant to completely process the order; generating by the intermediary based upon the first order data and the at least one data item, second order data that includes the minimum set of data required by the one merchant to completely process the order and providing the second order data to the one merchant for processing.

Applicant is directed to column 2, lines 9-67 of Sandberg-Diment.

Green et al teach that information not provided during a transaction may be retrieved from a merchant's database in order to complete the customer's order. See column 8, lines 28-63 of Green et al. Sandberg-Diment also discloses retrieving billing

information from an intermediary in order to complete a transaction. See column 3 of Sandberg-Diment.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teachings of Sandberg-Diment into the system of Green et al in order to allow a customer to complete a transaction in a secure manner.

As per claims 2-10, 16-24 and 30-38 see column 8, lines 29 to column 10, line 41 of Green et al and column 2, line 32 to column 3, line 42.

As per claims 11, 25 and 39 the mobile device of Green et al transmits order data over a wireless communications link. See column 4, lines 61-66 of Green et al.

As per claims 12-14, 26-28 and 40-42, the mobile device is a mobile telephone, digital assistant or personal computer having device identification data. See column 4, lines 61-66 of Green et al and figure 1 of Sandberg-Diment.
